

Hiking

Weymouth Woods is an 898-acre natural preserve that is different from traditional parks. This protected area serves to preserve and portray the natural features unique to its region. Weymouth Woods is a place where you can look at the longleaf pine forest and see how human actions have affected the environment, where you can learn about rare and endangered species—the red-cockaded woodpecker, the pine barrens tree frog and the bog spicebush. Walk the sandy paths of Weymouth Woods. Look to the canopy of its stately trees. Listen to the sounds of its woodlands. The fox squirrel, the longleaf pine and the role of fire are just a few of the subjects nature teaches in this fascinating ecosystem.

Tour Details: Your guide will take you on a two hour hike through the Weymouth Woods Sandhills Nature Preserve. The tour departs from the Carolina Hotel.
